In the case of the symbol at left, it means that the unit must never be disassembled.

ALWAYS OBSERVE THE FOLLOWING

⚠ WARNING

- Before using this unit, make sure to read the instructions below, and the Owner's Manual.
- Do not open (or modify in any way) the unit.
- Do not attempt to repair the unit, or replace parts within it (except when this manual provides specific instructions directing you to do so). Refer all servicing to your retailer, the nearest Roland Service Center, or an authorized Roland distributor, as listed on the "Information" page.

⚠ WARNING

- Never use or store the unit in places that are:
 - Subject to temperature extremes (e.g., direct sunlight in an enclosed vehicle, near a heating duct, on top of heat-generating equipment); or are
 - Damp (e.g., baths, washrooms, on wet floors); or are
 - Humid; or are
 - Exposed to rain; or are
 - Dusty; or are
 - Subject to high levels of vibration.

WARNING

- Make sure you always have the unit placed so it is level and sure to remain stable. Never place it on stands that could wobble, or on inclined surfaces.

- Do not allow any objects (e.g., flammable material, coins, pins); or liquids of any kind (water, soft drinks, etc.) to penetrate the unit.

- Immediately disconnect the USB cable, and request servicing by your retailer, the nearest Roland Service Center, or an authorized Roland distributor, as listed on the "Information" page when:

- If smoke or unusual odor occurs
- Objects have fallen into, or liquid has been spilled onto the unit; or
- The unit has been exposed to rain (or otherwise has become wet); or
- The unit does not appear to operate normally or exhibits a marked change in performance.

- In households with small children, an adult should provide supervision until the child is capable of following all the rules essential for the safe operation of the unit.

- Protect the unit from strong impact.
(Do not drop it!)

WARNING

- DO NOT play a CD-ROM disc on a conventional audio CD player. The resulting sound may be of a level that could cause permanent hearing loss. Damage to speakers or other system components may result.

CAUTION

- Try to prevent cords and cables from becoming entangled. Also, all cords and cables should be placed so they are out of the reach of children.

- Never climb on top of, nor place heavy objects on the unit.

- Disconnect all cords coming from external devices before moving the unit.

IMPORTANT NOTES

In addition to the items listed under “USING THE UNIT SAFELY” on pages 2 and 3, please read and observe the following:

Placement

- This device may interfere with radio and television reception. Do not use this device in the vicinity of such receivers.
- Noise may be produced if wireless communications devices, such as cell phones, are operated in the vicinity of this unit. Such noise could occur when receiving or initiating a call, or while conversing. Should you experience such problems, you should relocate such wireless devices so they are at a greater distance from this unit, or switch them off.
- Do not expose the unit to direct sunlight, place it near devices that radiate heat, leave it inside an enclosed vehicle, or otherwise subject it to temperature extremes. Excessive heat can deform or discolor the unit.
- When moved from one location to another where the temperature and/or humidity is very different, water droplets (condensation) may form inside the unit. Damage or malfunction may result if you attempt to use the unit in this condition. Therefore, before using the unit, you must allow it to stand for several hours, until the condensation has completely evaporated.

Maintenance

- For everyday cleaning wipe the unit with a soft, dry cloth or one that has been slightly dampened with water. To remove stubborn dirt, use a cloth impregnated with a mild, non-abrasive detergent. Afterwards, be sure to wipe the unit thoroughly with a soft, dry cloth.
- Never use benzine, thinners, alcohol or solvents of any kind, to avoid the possibility of discoloration and/or deformation.

Additional Precautions

- Use a reasonable amount of care when using the unit's buttons, sliders, or other controls; and when using its jacks and connectors. Rough handling can lead to malfunctions.
- When connecting / disconnecting all cables, grasp the connector itself—never pull on the cable. This way you will avoid causing shorts, or damage to the cable's internal elements.
- To avoid disturbing your neighbors, try to keep the unit's volume at reasonable levels (especially when it is late at night).
- When you need to transport the unit, pack it in shock-absorbent material. Transporting the unit without doing so can cause it to become scratched or damaged, and could lead to malfunction.

Handling CD-ROMs

- Avoid touching or scratching the shiny underside (encoded surface) of the disc. Damaged or dirty CD-ROM discs may not be read properly. Keep your discs clean using a commercially available CD cleaner.

Names of Things and What They Do

① USB Cable

Use this when connecting the UM-1EX to your computer.

② USB Indicator

This will light when you've connected the UM-1EX to your computer and your computer has detected the UM-1EX.

In order for your computer to detect the UM-1EX, you must install the driver and make settings.
(→“[Getting Connected and Installing Drivers](#)” **Windows** (p. 11) / **Macintosh** (p. 21))

③ ADVANCED (mode select) Switch

This switches the operating mode.

* Standard driver mode supports only Windows XP SP2 or later, and Mac OS X.

If you are using Windows 98/Me/2000/XP or XP SP1, or if you are using Mac OS 9, you must turn the ADVANCED (mode select) Switch ON before you connect the UM-1EX to your computer.

ON (Advanced mode)	This mode utilizes the UM-1EX's special, advanced MIDI driver. This advanced driver uses *FPT technology for rapid, high-performance MIDI transmissions. We recommend use of this mode.
OFF (Standard mode)	This mode uses the standard MIDI driver included with the OS. Use this if you do not have the special driver installed.

*FPT=Fast Processing Technology of MIDI Transmission

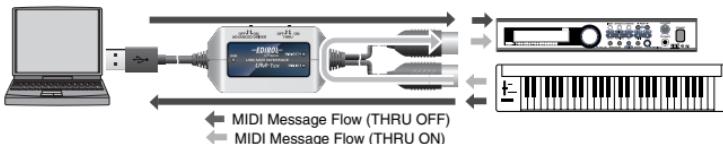

④ THRU Switch

Selects the destination to which the MIDI messages that flow in through the UM-1EX's MIDI IN cable are to output.

■THRU switch ON/OFF setting

You can use the **THRU switch** to switch the destination device for MIDI messages from the MIDI keyboard or digital piano connected to the MIDI IN cable. There is no need to change any cable connections.

Switch Setting	MIDI Message Destination Device
OFF	MIDI messages flowing in through the UM-1EX's MIDI IN cable are routed to the computer (sequencer software).
ON	MIDI messages flowing in through the UM-1EX's MIDI IN cable are output from the UM-1EX's MIDI OUT cable. If you are not using sequencer software with your performances, set this to ON.

* Don't change the setting of the **THRU switch** while playback is in progress. Doing so will cause MIDI errors.

⑤ MIDI OUT Indicator

This lights when MIDI messages from the computer are transmitted.

⑥ MIDI OUT Cable (CONNECT TO MIDI IN)

Connect this to the MIDI IN connector of the device (such as a sound module) that is to be employed by your computer for playing music.

⑦ MIDI IN Indicator

This lights when MIDI messages are received from the device connected to MIDI IN.

⑧ MIDI IN Cable (CONNECT TO MIDI OUT)

Connect this to the MIDI OUT connector of the device (such as a MIDI keyboard) that will be transmitting MIDI messages to your computer.

Getting Connected and Installing Drivers (Windows)

About the Driver Modes

What is a driver?

A “**driver**” is software that transfers data between the UM-1EX and application software running on your computer, when your computer and the UM-1EX are connected. The driver sends data from your application to the UM-1EX, and from the UM-1EX to your application.

About the driver modes

The UM-1EX has two operating modes, **Advanced mode** and **Standard driver mode**, and a different driver is used by each mode.

- * Standard driver mode supports only Windows XP SP2 or later.

If you are using Windows 98/Me/2000/XP or XP SP1, you must turn the ADVANCED (mode select) Switch ON before you connect the UM-1EX to your computer.

ON (Advanced mode)	This mode utilizes the UM-1EX's special, advanced MIDI driver. This advanced driver uses *FPT technology for rapid, high-performance MIDI transmissions. We recommend use of this mode. (→ “ Installing the Driver ” (p. 12))
OFF (Standard mode)	This mode uses the standard MIDI driver included with the OS. Use this if you do not have the special driver installed. (→ “ Installation of the standard driver ” (p. 37))

■ Installing the UM-1 driver

Use either OMS or FreeMIDI as the MIDI driver.

The included **UM-1 driver** is an add-on module for using the UM-1EX with OMS or FreeMIDI. OMS can be found in the **OMS 2.3.8 E** folder within the **OMS (Mac OS 9)** folder of the CD-ROM. If you would like to know more about OMS, refer to **OMS_2.3_Mac.pdf** which can be found in the same folder.

- * *Either OMS or FreeMIDI must be installed in your Macintosh, as appropriate for the sequencer software you are using.*
- * *If you install OMS after installing the UM-1 driver, you must install the UM-1 driver once again.*

If a UM-1EX is already connected to your Macintosh when you install the driver, a message like the following will appear when the Macintosh is started up. Perform the steps described below as appropriate for the message that is displayed.

If the screen indicates:

“Software needed for the USB device “UM-1” is not available. Would you like to look for the software on the Internet?” → click [Cancel].

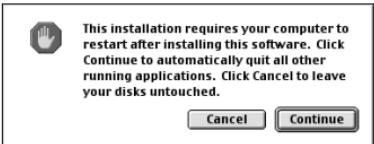

- 1.** With the UM-1EX left unconnected, start up Macintosh
 - * *Disconnect all USB cables other than those for your keyboard and mouse, and restart your Macintosh.*
- 2.** Exit all currently running software (applications).
- 3.** Prepare the CD-ROM. Insert the CD-ROM into the CD-ROM drive of your Macintosh.
- 4.** Double-click the **UM-1 Driver-E Installer** icon (found in the **Driver E (Mac OS 9)** folder of the CD-ROM) to start up the installer.

5. Verify the **Install Location**, and click [**Install**].

The installation location will be shown differently depending on your system. Make sure that you have selected the startup disk for the system you are currently using.

6. If a message like the following is displayed, click [**Continue**].

The other currently running software will exit, and installation will continue.

7. A dialog box will indicate **Installation was successful**.

Click [**Restart**] to restart your Macintosh.

Next, make the driver settings.

- 6.** The **Create a New Studio Setup** dialog box will appear. Click **[Cancel]**.
If you accidentally clicked **[OK]**, click **[Cancel]** in the next screen.

- 7.** Choose “Open” from the **File** menu.
From the **OMS Setting** folder that you copied in **step 3**, select the **UM-1** file, and click **[Open]**.
A screen like the one shown here will appear.

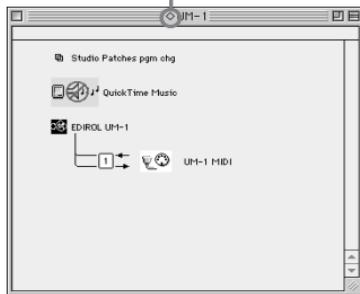

- 8.** From the **Edit** menu, select **OMS MIDI Setup**.
In the **OMS MIDI Setup** dialog box that appears, check **Run MIDI in background**, and click **[OK]**.

- 9.** From the **File** menu, choose **Make Current**. If you are unable to select **Make Current**, it has already been applied, and you may continue to the next step.

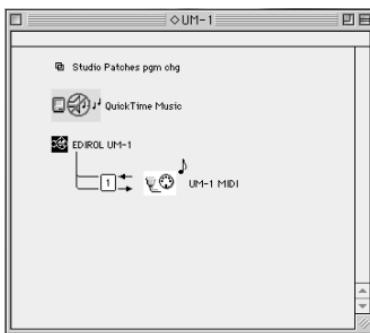

A diamond mark (◇) indicates the settings are enabled.

- 10.** Verify that MIDI transmission and reception can be performed correctly.
From the **Studio** menu, choose **Test Studio**.

- 11.** When you move the mouse cursor near the MIDI connector icon, the cursor will change to a J shape.

Click the MIDI connector icon shown in the illustration. If the UM-1EX's MIDI OUT indicator starts blinking, the settings are correct.

Basic Use

This chapter describes different basic methods of connecting the UM-1EX according to how the UM-1EX is to be used.

Basic Connections and MIDI Flow

Transmitting MIDI messages from a MIDI keyboard or digital piano to the sequencer software

To transmit MIDI messages from a MIDI keyboard or digital piano to the sequencer software or make a MIDI recording of a keyboard performance or other performance using sequencer software on your computer, make the following connections and settings.

MIDI device setting

MIDI IN	UM-1 MIDI
---------	-----------

* Make the device settings within the sequencer software.

THRU switch setting

THRU Switch	OFF
-------------	-----

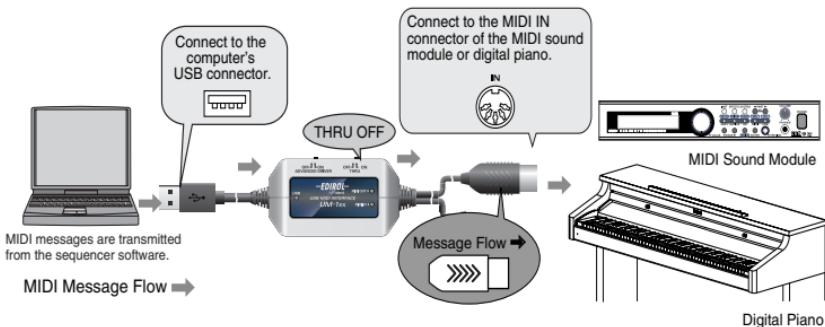

MIDI messages from the MIDI device (e.g. MIDI keyboard, digital piano) connected to the UM-1EX's MIDI IN cable are transmitted to the computer.

* Don't change the setting of the **THRU switch** while you're using the UM-1EX. Doing so will cause MIDI errors.

If you are experiencing duplicate notes (i.e., if your sound generating device plays two notes for each note it should play), turn Local Control OFF on your sound generating device, or turn the Thru function OFF in your sequencer software. For details on how to make these settings, refer to the owner's manual for your equipment.

Transmitting MIDI Messages from the sequencer software to a MIDI sound module or digital piano

If transmitting MIDI messages from the sequencer software to a MIDI sound module or digital piano, or if using a MIDI sound module's or digital piano's sound generator to play the sounds from the playback of sequencer software on the computer, make the following connections and settings.

MIDI device setting

MIDI OUT	UM-1 MIDI
-----------------	-----------

For more on how to make the settings, refer to “**Getting Connected and Installing Drivers**” (**Windows**: p. 11 / **Macintosh**: p. 21).

- * If you are using sequencer software that does not utilize Windows or Macintosh standard device settings, make the device settings within the sequencer software.

THRU switch setting

THRU Switch	OFF
--------------------	-----

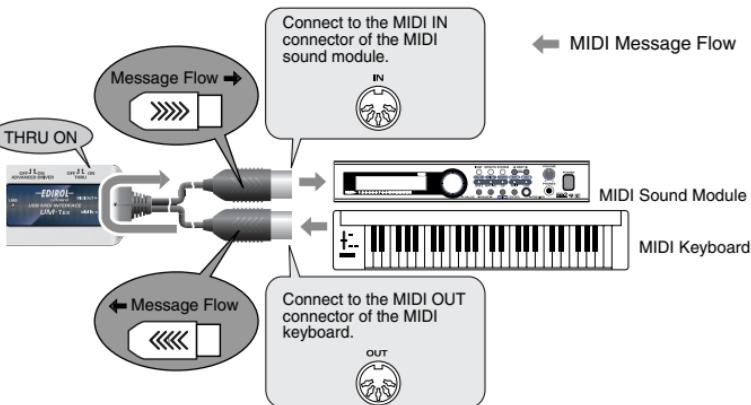

MIDI messages from the computer are transmitted to the MIDI device (e.g., MIDI sound module, digital piano) connected to the UM-1EX's MIDI OUT cable.

- * Don't change the setting of the **THRU switch** while you're using the UM-1EX. Doing so will cause MIDI errors.

Transmitting MIDI messages from a MIDI Keyboard or other device to a MIDI sound module

If you want to play a MIDI keyboard and send MIDI messages to a MIDI sound module, make the connections and settings shown below.

There is no need to connect the UM-1EX to a computer.

MIDI device setting

Since no computer is used, there is no need to make MIDI device settings.

THRU switch setting

THRU Switch | **ON**

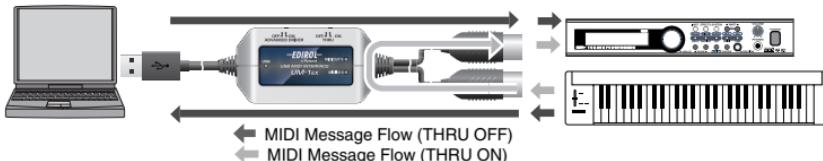

MIDI messages from the MIDI keyboard or digital piano connected to the UM-1EX's MIDI IN cable will be sent to the MIDI sound module connected to the UM-1EX's MIDI OUT cable. Even if the UM-1EX is connected to a computer, no MIDI messages will be sent to the computer.

- * *Don't change the setting of the **THRU switch** while you're using the UM-1EX. Doing so will cause MIDI errors*

■ THRU switch ON/OFF setting

You can use the **THRU switch** to switch the destination device for MIDI messages from the MIDI keyboard or digital piano connected to the MIDI IN cable. There is no need to change any cable connections.

Switch Setting	MIDI Message Destination Device
OFF	MIDI messages are transmitted to the computer (sequencer software).
ON	MIDI messages are transmitted to the MIDI device (e.g., MIDI sound module) connected to the MIDI OUT cable.

* Don't change the setting of the **THRU switch** while you're using the UM-1EX. Doing so will cause MIDI errors.

About Standard Driver Mode

Use this mode when using the standard MIDI driver provided with the operating system.

- * Standard driver mode supports only Windows XP SP2 or later, and Mac OS X.

If you are using Windows 98/Me/2000/XP or XP SP1, or if you are using Mac OS 9, you must turn the ADVANCED (mode select) Switch ON before you connect the UM-1EX to your computer.

Installation of the standard driver

1. With the UM-1EX left unconnected, start up your computer.
** Disconnect all USB cables other than those for your keyboard and mouse, and restart your Macintosh.*
2. Exit all currently running software (applications).
3. Set the UM-1EX's **ADVANCE DRIVER switch (mode switch)** to **OFF**.
4. Connect the UM-1EX to the computer.
The driver is automatically installed.
** This unit is equipped with a protection circuit. A brief interval (a few seconds) after connecting the UM-1EX is required before the unit will operate normally.*

Standard driver settings

These settings enable use of the UM-1EX with sequencer software that uses Windows or Macintosh standard device settings.

If using sequencer software that does not utilize Windows standard device settings, make the device settings within the sequencer software. For instructions on the device settings for your particular sequencer software, refer to the owner's manual that was supplied with it.

When using Windows XP

1. In accordance with Steps 1 in "Windows XP users" (p. 18), open the **Audio** tab in the **Sounds and Audio Devices Properties** dialog box.
2. Click the ▼ for **[Default device]** in the **MIDI music playback** menu and select the **USB audio device** from the list that appears.
Depending on your computing environment, "(2)" or some other number may be added at the end of the port name.

When using Macintosh (Mac OS X)

The procedure is the same as for Advanced mode. Refer to "Setting the driver" (p. 23).

Troubleshooting

If you experience problems, read this chapter first. It contains tips for solving most problems.

- * For details on operating your Windows or Macintosh computer, refer to the owner's manual of the computer and operating system you are using.

Problems Related to the USB Driver

Cannot install the driver correctly

Install the UM-1 driver once again as described in **Getting Connected and Installing Drivers (Windows)** (p. 11) or **Getting Connected and Installing Drivers (Macintosh)** (p. 21).

Is the UM-1EX connected correctly?

Make sure that the USB connector of your computer is connected to the UM-1EX.

Could any other USB device be connected?

Before you install, disconnect all USB devices except for your mouse and keyboard.

Could other software or resident software (such as antivirus programs) be running?

Installation may not be successful if other programs are running.

Be sure to close all other programs before installation.

Is the CD-ROM correctly inserted into your CD-ROM drive?

Installation is not possible unless the CD-ROM included with the UM-1EX is inserted in your CD-ROM drive. Make sure that the CD-ROM is correctly inserted into your CD-ROM drive.

Are you attempting to install from a networked CD-ROM drive?

You cannot install from a networked CD-ROM drive.

Is the CD-ROM or the lens of the CD-ROM drive be dirty?

If the CD-ROM or the lens of the CD-ROM drive is dirty, the installer may not work correctly.

Clean the disc and/or lens using a commercially-available CD cleaner or lens cleaner.

Is your computer's power-conservation mode turned off?

If power-conservation settings are enabled on your computer, please disable any such settings. For the procedure, refer to the owner's manual of your computer.

Is there sufficient free space on your hard disk?

Delete unneeded files to increase the amount of free space. After deleting the unneeded files, empty the recycling bin.

Could the UM-1EX's ADVANCED (mode select) Switch be OFF?

Turn the UM-1EX's ADVANCED (mode select) Switch ON, restart Windows, and re-install the driver.

Does your computer or USB hub have sufficient power supply capacity?

The UM-1EX cannot be connected if insufficient power is supplied to it. Check whether one of the following cases apply.

- If you are using the UM-1EX with a notebook computer that is running on its battery, operation may be unreliable with some models of computer. If this is the case, connect the AC adaptor to your notebook computer.
- The power conservation mode of your computer may limit the power that is supplied to USB. Check the settings of your computer.
- In some cases, the UM-1EX cannot be used with a bus-powered hub (a hub that does not contain a power supply). Please use a self-powered hub (a hub that contains a power supply).

Is USB enabled on your computer?

Refer to the operation manual for your computer, and make sure that USB is enabled.

Does your computer meet the USB specifications?

If you are using a computer that does not fulfill the electrical requirements of the USB specifications, operation may be unstable. In this case, you may be able to solve the problem by connecting a USB hub.

In the Device Manager, do you see "Other device," "Unknown device," or a device for which "?" , "!" or "x" is displayed? (Windows)

If the driver installation could not be successfully completed, the installed driver may remain in an incomplete state.

Re-install the driver. (→“Installing the Driver” (p. 12))

Is OMS or FreeMIDI installed? (Mac OS 9)

The UM-1 driver cannot be installed unless OMS or FreeMIDI are installed. Please install OMS or FreeMIDI.

Windows XP/2000 displays a “Hardware Installation” or “Digital Signature Not Found” dialog box

Did you make “Driver Signing Options”?

In order to install/re-install the driver, you must make the settings described in “**Driver Signing Options**” (p. 12).

You are asked to install the driver file even though you installed the driver (Windows)

Did you connect the UM-1EX to a different USB connector than the one you used when installing the driver?

If your computer or USB hub has two or more USB connectors, and you connect the UA-1EX to a different USB connector, you may be asked for the driver file even though the driver has already been installed in your computer. (Such a response does not indicate a malfunction.)

Proceed as follows to install the driver.

1. Connect the UM-1EX to the computer.

Windows XP:

1. The **Found New Hardware Wizard** dialog box will appear.
If the message “**Connect to Windows Update to search for software?**” appears, choose “**No**” and then click [**Next**].
2. Choose “**Search for the best driver in these locations**” and click [**Next**].
If a dialog box with an “!“ or “x“ symbol will appear, click [**Continue Anyway**] to proceed with the installation. If you are unable to continue, click [**OK**] and repeat the driver installation.
(→“**Installing the Driver**” (p. 12))

Windows 2000:

If a dialog box indicating “**Digital Signature Not Found**” will appear, click [**Yes**] to proceed with the installation. If you are unable to continue, click [**OK**] and repeat the driver installation.
(→“**Installing the Driver**” (p. 12))

2. The **Completing the Found New Hardware Wizard** dialog box will appear.
Click [**Finish**].
3. If the **Change System Settings** dialog box appears, click [**Yes**]. Windows will restart automatically.

If you are unable to complete driver installation using the above method, repeat the driver installation. (→“**Installing the Driver**” (p. 12))

"Find new hardware wizard" does not execute automatically "Find new hardware wizard" ends before the process is completed "Found unknown device" appears even though you installed the driver (Windows)

Is the USB cable connected correctly?

Make sure that the UM-1EX's USB cable and your computer are correctly connected.
It may take about 15seconds (or more) after the USB cable is connected.

Does your computer or USB hub have sufficient power supply capacity?

The UM-1EX cannot be connected if insufficient power is supplied to it. Check whether one of the following cases apply.

- If you are using the UM-1EX with a notebook computer that is running on its battery, operation may be unreliable with some models of computer. If this is the case, connect the AC adaptor to your notebook computer.
- The power conservation mode of your computer may limit the power that is supplied to USB. Check the settings of your computer.
- In some cases, the UM-1EX cannot be used with a bus-powered hub (a hub that does not contain a power supply). Please use a self-powered hub (a hub that contains a power supply).

Is USB enabled on your computer?

Refer to the operation manual for your computer, and make sure that USB is enabled.

Does your computer meet the USB specifications?

If you are using a computer that does not fulfill the electrical requirements of the USB specifications, operation may be unstable. In this case, you may be able to solve the problem by connecting a USB hub.

If the above actions do not solve the problem, it is possible that the UM-1EX has been incorrectly detected by the computer. Please reinstall the driver from the beginning of the procedure.

UM-1EX is not detected when making OMS or FreeMIDI settings (Mac OS 9 users)

Is the UM-1EX detected?

- Reconnect the UM-1EX.
- If other USB devices are connected, connect only the UM-1EX.
- It is possible that the Macintosh did not correctly detect and initialize the UM-1EX. Leave the UM-1EX connected, and restart your Macintosh. If it is still not detected, shut down your Macintosh, and then restart it.
- In some cases, the UM-1EX will not be detected if you have connected it to the USB connector located on the keyboard of the Macintosh. Please connect it to a USB connector on the Macintosh itself.

Deleting the Driver

If you were unable to install the driver according to the procedure given, the UM-1EX may not be recognized correctly by the computer. In this case, use the following procedure to delete the driver, and then follow the procedure to install the driver once again.

Windows users

Here's how to uninstall the dedicated driver.

1. Start up Windows with the UM-1EX disconnected.

Disconnect all USB cables other than a USB keyboard or USB mouse.

* *If you are using Windows XP Professional/2000, log on as a user that has administrative privileges (e.g., Administrator).*

2. Insert the CD-ROM into the CD-ROM drive of your computer.

3. From the Windows **Start** menu, choose “**Run....**”

In the Run dialog box, input the following into the **Open** field, and click **[OK]**.

Windows XP/2000 users: D:\Driver\XP2kl\Uninstal.exe

Windows Me/98 users: D:\Driver\Me98\Uninstal.exe

* *The drive name is “D:” in the example shown here, but may be different on your system. Use the drive name for your CD-ROM drive.*

4. Follow the on-screen instructions to uninstall the driver.

Macintosh (Mac OS X) users

1. Start up Macintosh with the UM-1EX disconnected.
Disconnect all USB cables other than a USB keyboard or USB mouse.
2. Prepare the CD-ROM.
Insert the CD-ROM into the CD-ROM drive of your Macintosh.
3. In the **Driver (Mac OS X)** folder of the CD-ROM, double-click "**UM1_Uninstaller.**"
4. The display will indicate "**This uninstalls EDIROL UM-1 driver from this Macintosh.**"; click [**Uninstall**].
If any other message appears, proceed as directed by that message.
5. The display will indicate "**Are you sure to uninstall the driver?**"; click [**OK**].
6. The "**Authenticate**" dialog box will appear; enter the password and click [**OK**].
7. The display will indicate "**Uninstillation is completed.**"; click [**Restart**]. Your Macintosh will then restart.

Macintosh (Mac OS 9) users

1. Start up Macintosh with the UM-1EX disconnected.
Disconnect all USB cables other than a USB keyboard or USB mouse.
2. From the **system extensions folder** inside the **System folder**, drag "**USB UM-1 Driver**" into the trash to delete it.
3. Delete **UM-1** from the **OMS Folder** inside the **System folder**, or drag **UM-1 Driver** from the **FreeMIDI Folder** inside the **System folder** to the trash.
4. Restart the Macintosh.

Problems When Using the UM-1EX

Sound is interrupted during MIDI playback

In Windows, did you make the setting described in "Giving priority to background services"?

In order to ensure that MIDI processing occurs smoothly, make the setting described in **Giving priority to Background Services.** (→Windows XP (p. 15) / Windows 2000 (p. 16))

Did you plug in the USB cable, or unplug it while an software was running?

Exit all software that are using the UM-1EX, and re-connect the UM-1EX.

Is your computer in Suspend or Sleep mode?

If so, get your computer to resume normal operation, then exit all software that are using the UM-1EX. Next re-connect the UM-1EX.

Are you running multiple software?

If multiple software are running simultaneously, an error message may appear. If this occurs, click **[OK]** and exit the other software.

Even if an software window is closed, it is still running if it appears in the taskbar. Be sure to exit unneeded software displayed.

Playback or recording halts midway through, and then becomes impossible

Was a heavy processing load experienced while using the UM-1EX, such as accessing the CD-ROM drive or a network?

If an operation involving a heavy processing load is performed while the UM-1EX is in use, it may not operate correctly. If this occurs, stop playback/recording, and then try resuming playback/recording. If you are still unable to play back/record, exit all software that use the UM-1EX, disconnect the UM-1EX from the computer and then reconnect it.

Operating system becomes unstable

Operation becomes unstable when the computer is started up with the UM-1EX already connected

Please start up your computer with the UM-1EX disconnected, and then connect the UM-1EX. On a computer that uses a USB keyboard, starting up the computer with the UM-1EX already connected may cause operation to become unstable. In this case, start up the computer with the UM-1EX disconnected, and then connect the UM-1EX.
