Ascom NetPage
Customised messaging.

It's quite simple really. With Ascom NetPage, you send a message directly from your web browser to your colleagues' cordless telephone or pager. You know that your message has been sent instantaneously, that it has been received and that it is being acted upon. This gives you the freedom and peace of mind to get on with other tasks.

Getting your message across

The increased flexibility and shorter response times that characterise today's working environment require your communication to be shorter, sharper and snappier. Although colleagues may be busy in another part of your care facility, factory, office environment, hotel…., NetPage gives you full access to them at all times for important messages that cannot wait. To ensure that you are in full control of the communication process, you are able to request an acknowledgement, as well as follow the status of a sent message.

Time is money

The reliability of the NetPage IP-messaging tool means that you don't have to spend precious time chasing colleagues to confirm that they have received your message. Not only does this save time, and therefore money, this also contributes to more efficient service and workflow coordination within your organisation. In hospitals, for example, the reliability of the system can even save lives.

Modern alternative

NetPage is the perfect solution for receptionists and control room staff who spend a lot of time coordinating the activities of colleagues who are on the move. Moreover, anyone with authorised access to your Intranet can use the solution to send a message. The message reaches the intended recipient even if the cordless telephone or pager is in meeting mode or being used.

Save even more time

To save even more time, you can pre-program messages and create paging groups. If necessary, for example, in life threatening situations, you can even pre-define action groups and messages.

Standardised notification and alarm messages and procedures reduce the risk of human error and improve workplace safety and workflow efficiency.

Adapted to your particular needs

NetPage is designed for easy use, but by customising it, we can enhance the user friendliness even more.

By carefully identify the needs of the specific customer, Ascom have successfully adapted NetPage to suit companies in many different areas, such as hospitals, paper industry, elderly care, pharmaceutical industry and many more.
