

OWNERS MANUAL

Intended to alert the user to the presence of uninsulated "dangerous voltage" within the product's enclosure that may be of sufficient magnitude to constitute a risk of electric shock to persons.

Intended to alert the user to the presence of important operating and maintenance (servicing) instructions in the literature accompanying the product.

CAUTION: Risks of electrical shock — DO NOT OPEN

CAUTION: To reduce the risk of electric shock, do not remove cover. No user serviceable parts inside. Refer Servicing to qualified service personnel.

STEREO CHORUS™ 212

HIGH GAIN INPUT (1)

Used for most electric guitars. It is 6 dB louder than the Low Gain input.

LOW GAIN INPUT (2)

Provided for instruments that have extremely high outputs, which can result in overdriving (distorting) the High Gain input. If both inputs are used simultaneously, the output levels are the same (both are Low Gain).

NORMAL GAIN (3)

Controls the volume level of the normal channel and is not affected by the SuperSat® or Post Gain controls.

BRIGHT SWITCH (4)

Provides a preset boost (+6 dB) to treble frequencies. To activate, depress the switch to its "in" position.

CHANNEL SELECT SWITCH (5)

Allows selection of the lead or normal channel. The "in" position of the switch selects the lead channel and the "out" position selects normal.

NOTE:

Channel selection may also be accomplished by the remote footswitch. If remote selection is desired the channel switch must be in the "in" (lead) position.

LOW, MID & HIGH EQ (6)

Passive tone controls that regulate the low, mid and high frequencies, respectively.

PRESENCE (ACTIVE) (7)

An active tone control (+/- 15 dB) that varies the extreme high frequency range. 0 to +15 boost (increase), 0 to -15 cut (reduce).

SUPERSAT®(8)

A transistor simulation of tube distortion (soft clipping). To activate the Supersat® effect, crunch channel must be activated via remote footswitch.

POST GAIN (9)

Controls the overall volume level of the crunch channel. The final level adjustment should be made after the desired sound has been achieved.

POST GAIN (10)

Controls the overall volume level of the lead channel. The final level adjustment should be made after the desired sound has been achieved.

BOTTOM (11)

An active tone control (shelving type +/- 15 dB) that varies the low frequency boost or cut.

NOTE: This control is not functional on the normal channel.

EDGE (12)

An active tone control (shelving type +/- 15 dB) that varies the high frequency boost or cut.

NOTE: This control is not functional on the normal channel.

TYPE (13)

Set this control to the desired digital reverb, echo, or delay. (See effect table)

LEVEL (14)

Determines the level of the digital effects processor. This control works in conjunction with the effect select switch (type).

RATE CONTROL (15)

Controls the sweep rate (frequency) of the chorus effect.

DEPTH CONTROL (16)

Controls the depth (intensity) of the chorus effect.

POWER LED (17)

Illuminates when AC power is being supplied to the amp.

GROUND SWITCH (18)

Three position rocker-type switch which, in most applications, should be operated in its center or zero position. There may be some situations when audible hum and/or noise will come from the loudspeaker. If this situation arises, position the ground switch to either positive or negative (+ or -) or until the noise is minimized.

NOTE: Should the noise problem continue, consult your Authorized Peavey Dealer, the Peavey Factory, or a qualified service technician. THE GROUND SWITCH IS NOT FUNCTIONAL ON 220/240 VOLT MODELS.

CAUTION
TO PREVENT THE RISK OF FIRE AND SHOCK HAZARD,
DO NOT EXPOSE THE APPLIANCE TO RAIN OR MOISTURE.
DO NOT REMOVE FROM CASE. NO USER SERVICEABLE
PARTS INSIDE. REFER SERVICING TO QUALIFIED SERVICE
PERSONNEL.
AVIS: RISQUE DE CHOC ELECTRIQUE. NE PAS OUVRIR.

POWER SWITCH (19)

Depress the switch to the "On" position. The red pilot light (LED) will illuminate indicating power is being supplied to the unit.

LINE CORD (20)

(120V products only)

For your safety, we have incorporated a 3-wire line (main) cable with proper grounding facilities. It is not advisable to remove the ground pin under any circumstances. If it is necessary to use the equipment without proper grounding facilities, suitable grounding adaptors should be used. Less noise and greatly reduced shock hazard exists when the unit is operated with the proper grounded receptacles.

POWER AMP INPUT (21)

Use to connect line level signal to the power amplifier.

PREAMP OUT MIX 2 (22)

The Preamp Output can be used to route the amplified signal to a mixing console, tape recorder, etc. Connect the Preamp Output, using a shielded cable, to an input of the tape recorder, mixer, outboard power amplifier, etc. This patch does not affect the operation of the amplifier.

NOTE: When only the preamp out mix 2 jack is used, the mixed chorus effect is present at this point. (Combination of dry and chorused signals) When both preamp out jacks are engaged, only the chorused signal appears at this point.

PREAMP OUT DRY 1 (23)

The preamp output can be used to route the amplified signal to a mixing console, tape recorder, etc. Connect the preamp output, using a shielded cable, to an input of the tape recorder, mixer, outboard power amplifier, etc. This patch does not affect the operation of the amplifier.

NOTE: The dry (un-chorused) signal is always present at this point even when both preamp out jacks are engaged. This jack should be used for normal preamp out patching when the chorus effect is not desired.

REMOTE FOOTSWITCH JACK (24)

Provided for the connection of the supplied remote. Footswitch is used to select the normal, crunch, or lead channels and defeat the digital reverb and chorus circuits.

NOTE: The footswitch is equipped with LEDs to indicate channel and effects that have been selected.

Tone Settings

Tone settings given are general and will vary according to type of guitar, type and gauges of strings, type of pickup and even type of pick. Personal taste, playing style, and type of music greatly contribute to desired tonality.

CAUTION

EXPOSURE TO EXTREMELY HIGH NOISE LEVELS MAY CAUSE A PERMANENT HEARING LOSS. INDIVIDUALS VARY CONSIDERABLY IN SUSCEPTIBILITY TO NOISE INDUCED HEARING LOSS, BUT NEARLY EVERYONE WILL LOSE SOME HEARING IF EXPOSED TO SUFFICIENTLY INTENSE NOISE FOR A SUFFICIENT TIME.

THE U.S. GOVERNMENT'S OCCUPATIONAL SAFETY AND HEALTH ADMINISTRATION (OSHA) HAS SPECIFIED THE FOLLOWING PERMISSIBLE NOISE LEVEL EXPOSURES:

DURATION PER DAY IN HOURS

ACCORDING TO OSHA, ANY EXPOSURE IN EXCESS OF THE ABOVE PERMISSIBLE LIMITS COULD RESULT IN SOME HEARING LOSS.

EAR PLUGS OR PROTECTORS IN THE EAR CANALS OR OVER THE EARS MUST BE WORN WHEN OPERATING THIS AMPLIFICATION SYSTEM IN ORDER TO PREVENT A PERMANENT HEARING LOSS IF EXPOSURE IS IN EXCESS OF THE LIMITS AS SET FORTH ABOVE. TO INSURE AGAINST POTENTIALLY DANGEROUS EXPOSURE TO HIGH SOUND PRESSURE LEVELS, IT IS RECOMMENDED THAT ALL PERSONS EXPOSED TO EQUIPMENT CAPABLE OF PRODUCING HIGH SOUND PRESSURE LEVELS SUCH AS THIS AMPLIFICATION SYSTEM BE PROTECTED BY HEARING PROTECTORS WHILE THIS UNIT IS IN OPERATION.

CAUTION

THIS AMPLIFIER HAS BEEN DESIGNED AND CONSTRUCTED TO PROVIDE ADEQUATE POWER RESERVE FOR PLAYING MODERN MUSIC WHICH MAY REQUIRE OCCASIONAL PEAK POWER TO HANDLE OCCASIONAL PEAK POWER. ADEQUATE POWER "HEADROOM" HAS BEEN DESIGNED INTO THIS SYSTEM. EXTENDED OPERATION AT ABSOLUTE MAXIMUM POWER LEVELS IS NOT RECOMMENDED SINCE THIS COULD DAMAGE THE ASSOCIATED LOUDSPEAKER SYSTEM. PLEASE BE AWARE THAT MAXIMUM POWER CAN BE OBTAINED WITH VERY LOW SETTINGS OF THE GAIN CONTROLS IF THE INPUT SIGNAL IS VERY STRONG.
